

# **Sump System Care Guide**

**UV** POOLS

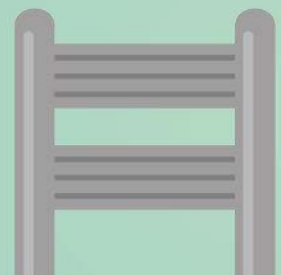

# Sump Pit Tips

**Spring time is common to high water table with all the snow melt. This is a very important time to be pumping out your sump pit.**

# Sump Pit Tips

- ◆ **Keep a pump with a float in the pit all summer.**
- ◆ **Check the sump pit after heavy rains or if you think you have a leak in your pool.**
- ◆ **A properly installed sump pit will show pool leaks long before any other damage occurs.**
- ◆ **Your sump pit will only prove beneficial if the water in it is pumped out!**
- ◆ **Water from your sump pit must be pumped at least 30' away from your pool and to a lower lying area such as a ditch or swail.**

# Summarizing

- ◆ **Start pumping out your sump pit as early in the season as possible**

# Winterizing

- ◆ **Keep sump pits dry until freeze up (if applicable)**
- ◆ **Keep the pool water level as high as possible for the winter, the more water inside the pool the better**
